

Connect your Grandstream GRP261x

Get your desk phone online with a few simple connections.

1 Find the correct ports underneath your phone

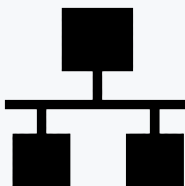

PC PORT (optional)

LAN (Internet)

DC 5V (power)

2 Connect the Internet

Plug an Ethernet cable from your router or network switch into the phone's LAN port (network symbol).

3 Connect a PC (optional)

If you need a computer at your desk, connect it to the phone's PC port using a second Ethernet cable.

4 Connect power, then wait for your phone

Connect the handset cord. Use a compatible 5V power adapter in the DC5V socket, unless your phone model and network switch support Power over Ethernet (PoE).

Wait for the date and time to appear on the screen before making a call.

Tip: The PC port may be left empty. Not every GRP261x variant supports PoE.
